Conversion Chart

This chart can help you convert some common weights and volumes. In Canada many imperial measurements are commonly used due to the trade and close proximity to the USA.

If you and/or your country doesn't commonly use one of the measurements in the manual, the below chart should help you convert the measurements used throughout the course.

Metric & Imperial

Volume

1 Litre (l)	0.264172 US Gallons (gal)
3.78541l	1 gal
200 l	52.8344 gal
1000 l	264.172 gal
1 Gallon	1.20095 gal

Weight

0.453592 Kilograms (kg)	1 Pounds (lb)
45.3592 kg	100 lbs
1587.573 kg	3500 lbs

Temperature

0 Celsius (C)	32 Fahrenheit (F)
50 C	122 F
100 C	212 F

Distance

1 Kilometres	0.621371 Miles
30 Centimetres	11.811 Inches

Some common words in the British English language change in spelling from country to country as well. American English students might not be used to seeing some of the words throughout the course spelled in British English.

As this course is written in Canada, some American students may not have seen some of the words spelled the way they are throughout the course. The following list ensures that you haven't been spelling them wrong and you know what the words are referring to.

Words include Grey / Gray, Neighbour / Neighbor, Colour / Color, Behaviour / Behavior, Labour / Labor, and so on. Mainly, the -our on a word is different than -or in American English.
